

# Making payments with Yobebuddy rewards

## Plastic-to-mobile card conversion

There are two ways to pay with a smartphone:

1. Using a smartphone, log into the StoreCard Manager website, then simply select the "Pay with your mobile card" button. Here you will see a QR code that can be used to make a payment.

2. A second option is to create a MOBILE CARD that can be saved in your mobile wallet.

iPhone - the digital card will be stored in your Passbook app. Simply select the "Add to Passbook" button and you will be redirected to a web page that creates the mobile card. Select the "Add" button once it appears on your screen.

Android - the digital card will be stored in the PassMarket app. Simply select the "PassMarket for Android" button and follow the steps outlined on the StoreCard Manager website.

Helpful tip. Once a mobile card has been created and saved to a mobil wallet, select the "i" found on the bottom right hand corner of the mobile card for quick access to the StoreCard Manager website. The CVV can be found on the front of the mobile card, or on the back of the plastic card.
